## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claim 1 is rejected under 35 U.S.C. 102(a) as being anticipated by Nishizawa et al. This reference discloses in col. 16, lines 5-50 and col.21, lines 54-67 a method of making a magnetic recording device comprising applying an undercoating on to a substrate, drying and curing the undercoating and applying a magnetic coating to the undercoating using a nozzle and smoothing the wet magnetic coating with a bar. It is the examiner's opinion that applicant's claim is anticipated by the reference process.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nishizawa et al for the same reasons as urged above. The limitations of these dependent claims are conventional and do not render these claims unobvious. See

Art Unit: 1762

Morishita et al at col. 20, lines 10-15 and col. 29, lines 1-45 for thickness of .01 to 10 microns.

Claims 7-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nishizawa et al for the same reasons as urged in the above paragraph in view of Wallack et al. The primary reference does not disclose radiation curing. The secondary reference to Wallack et al at col. 5, lines 55-65 discloses drying an undercoating followed by radiation curing. It is the examiner's opinion that it would have been obvious for one having ordinary skill in this art at the time the invention was made to substitute the under-layer of the secondary reference for the under-layer of the primary reference to realize all the benefits inherent in the radiation cure systems.

The Limitations of dependent claims 10, 14, 15 and 19 are considered conventional and do not render these claims unobvious. See Morishita et al for the same reasons as suggested above.

Evans et al is cited as of interest.
